

Supfina – Press release

PI 202 –02/2009

INTEC exhibition at Leipzig, Germany

Wolfach, 04.02.2009 – Supfina Grieshaber will take part in the INTEC exhibition once more. The producer of Surface Finishing Systems would like to invite you to meet in Leipzig, Germany. The show will be held on February 24th-27th,2009. Visit us at the booth of Messrs. WILCO in hall 1, booth E02.

Supfina Grieshaber always offers effective solutions when dealing with flexible, cost-efficient surface processing. We combine many years of experience in Superfinishing with stone and band tools with pre- and post-processing know-how.

At the INTEC, the 12th Trade fair for manufacturing, tool and special-purpose machine construction, we would like to offer interested visitors the opportunity to get to know our Supfina Lean Systems line a little better. These systems are being installed everywhere when inexpensive production capabilities are needed for short-run solutions and/or quick delivery times. However, these units can also be used in series production. This is possible through a modular and flexible machine concept of the Lean Systems. Many different part types can be processed.

We are looking forward to your attendance!
