

Supfina exhibits peak technology at the Hanover EMO

Wolfach, 18 July 2011

Preparations in-house for the EMO exhibition in Hanover from 19 to 24 September 2011 are keeping everyone busy. But what, exactly, Supfina Grieshaber, the internationally renowned machine-tool manufacturer from Wolfach, South Germany, will be showing there is still largely a secret. What is certain is that visitors to the trade-fair will be presented with detailed views of the comprehensive product range available from these specialists for surface superfinishing.

Machines representing all three product families: superfinishing, double disk grinding and precision grinding, will form the basis of the company's exhibition. By presenting these crucial fields of application, Supfina will be able to show how it meets customer requirements of the most demanding technological standards. The highlight of the exhibition will be the presentation of a new design of machine which is being shown in Hanover for the first time ever. "We will be showing our visitors, customers and all other interested parties something of particular interest, alongside our comprehensive presentation of core applications," enthuses Rainer Waltersbacher, Managing Director of this specialist company for surface finishing systems. A visit to the exhibition (Hall 11, Stand A14) promises to be an exciting one!

Short profile: Supfina Grieshaber GmbH & Co KG, with facilities in Germany, the United States and China, is one of the world's leading manufacturers of surface machining technology. The company's range of products includes machines and attachments for superfinishing, double disk grinding and precision grinding. As a supplier of integrated systems, Supfina can provide you with solutions comprising versatile machines, knowledge of processes gained through many years of experience and tried-and-tested tools. Consistent orientation towards customers and service are essential elements of the company's traditional success.
