

## Technical press release (TPR)

Supfina Grieshaber GmbH & Co. KG  
Hall 11, booth E26

The product is a new development

Photographic material can be requested: [p.mich@supfina.com](mailto:p.mich@supfina.com)

The product is part of the principal range: Cutting machine tools

## Supfina Planet V

With the machine series of Supfina Planet V into new dimensions at double disk grinding of flat precision workpieces.

The extremely rigid and high performance machine system, offers highest finish qualities to the customer in 2 available sizes (V4 and V7) for workpiece dimensions of Ø 5-180mm with simultaneous reduction of the costs per piece.

Thereby trendsetting machine features are integrated, for example the patented Tilting Navigation for the operator-supported machine adjustment, the integrated tool change device as well as a modular dressing system for conventional and/or superabrasive tools.

Additionally three different grinding modes can be used: Throughfeed, Throughfeed-Plungecut, Reciprocating mode. This allows the customers react on modified quality requirements at any time.

The ergonomic design of the series Planet V with integrated switch cabinet ensures excellent accessibility for maintenance and service. Its compact dimensions (self contained) make it particularly suitable for the integration into existing or new lines.
